

Ford Dunton, two years in. Connected Vehicle programmes via Expleo: spend-vs-target reconciliation behind £3M+ of budget decisions, Power BI and VBA reporting, and training guides for engineers from week one to senior.

Case 1: a deal model that became a product. 13 linked tabs and 1,760 live formulas, built from one config file by a Python script. It reproduced the original analysis to the penny.

Case 3: one person, run like a team. Leads, email, compliance dates and follow-ups pulled into one system: 24 email rules from one script and 4 jobs that run on a schedule.

Case 5: a map for a festival with no signal. Notting Hill Carnival's 37 sound systems pinned to GPS, working offline once loaded. Live at adeadetayo6.github.io/carnival.
